 Share

Run

```
1 def insert_price(prices, price):
2     prices = prices.copy()
3     prices.append(price)
4
5     i = len(prices) - 2
6
7     while i >= 0 and prices[i] > price:
8         prices[i + 1] = prices[i]
9         i -= 1
10
11     prices[i + 1] = price
12
13     return prices
14
15
16 if __name__ == "__main__":
17     prices = []
18
19     for p in [102.5, 98.3, 105.1, 100.0, 97.8]:
20         prices = insert_price(prices, p)
21
22     assert prices == sorted([102.5, 98.3, 105.1, 100.0, 97.8])
```

Output

All test cases passed!

=== Code Execution Successful ===
